

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Please amend the claims as follows:

1. (Cancelled).

2. (Cancelled).

3. (Cancelled).

4. (Currently Amended) An outer mirror device for a vehicle comprising:
a mirror visor cover which covers a back surface of a mirror for rearward viewing to
form a space between the mirror and the mirror visor cover;

a mirror surface angle adjusting mechanism at which an electric motor, a rotating
member rotating due to rotation of the electric motor, and a portion of a drive rod connected
to the mirror and moving rectilinearly due to rotation of the rotating member, are
accommodated in a first case, the mirror surface angle adjusting mechanism changing a
mirror surface angle of the mirror by rectilinear movement of the drive rod;

a control device having a second case which is connected to the first case within the
space, and a control substrate which is accommodated within the second case and at which is
provided a control circuit power-supplying the electric motor on the basis of an operation
signal;

a mirror surface angle detecting sensor disposed within the second case, and detecting
one of a position of the drive rod and a rotational position of the rotating member,

wherein one of said first and second cases includes a wall disposed between said mirror
surface angle adjustment mechanism and said control device that includes an opening for
accommodating an electrical connector having detachably connectible electrical terminals
such that said electrical terminals are interconnected when said first and second cases are
positioned adjacent to one another.

5. (Withdrawn) The outer mirror device for a vehicle of claim 3, wherein the mirror surface angle detecting sensor is provided at the control substrate.

6. (Original) The outer mirror device for a vehicle of claim 4, wherein the mirror surface angle detecting sensor is provided at the control substrate.

7. (Withdrawn) The outer mirror device for a vehicle of claim 5, wherein the mirror surface angle detecting sensor detects, in a non-contact manner, the one of the position of the drive rod and the rotational position of the rotating member.

8. (Withdrawn) The outer mirror device for a vehicle of claim 2, wherein the first case and the second case are integral.

9. (Original) The outer mirror device for a vehicle of claim 4, wherein the first case and the second case are integral.

10. (Canceled).

11. (Canceled).

12. (Canceled).

13. (Canceled).

14. (Canceled).

15. (Canceled).

16. (Previously Presented) The outer mirror device for a vehicle of claim 4, wherein said second case is water-tight.
